# How To Use :

## Authentication :

| | |
|---|---|
| **Plain Text** | Reads **Credentials Path** as containing **Plain-Text** credentials |
| **Salted-Hashed** | Reads **Credentials Path** as containing **Salted-Hashed** credentials |

## Credentials Path :

| |
|---|
| Depending on how **Authentication** was specified, processing the credentials will vary. |
| For **Plain-Text**, credentials are read in the format<br><br>**username : password** |
| For **Salted-Hashed**, credentials are read in the format<br><br>**username : salt : SHA256-Hashed-Password** |

## XOR-Key Path :

| |
|---|
| The location of the "**XOR-Key**" file that will be used to either encrypt the data before being sent, if the user is the **Client**, or to decrypt the data if the user is the **Server** |

## Save-Files-To Path :

| |
|---|
| The location where the **Server** will save any files that are received |

## Port :

| | |
|---|---|
| **Server** | The port where the service will begin |
| **Client** | The port where the **Server** service is executing and which the **Client** will attempt to connect to |
